

# ECHOSPONGE

CANCELLOUS BLOCK TISSUE ALLOGRAFT

**Why EchoSponge?:** EchoSponge is a bone tissue allograft made of 100% cancellous bone. Frontline's proprietary process creates an optimal scaffold for new bone growth with both osteoinductive and osteoconductive potential.

**Handling:** Once hydrated, EchoSponge can compress to easily fill irregular bone defects. The sponge like properties allow it to expand to completely fill bone voids and prevent migration from the surgical site.

**Indications:** EchoSponge is best for use in defects or gaps where a malleable bone void filler is needed.

**Safety:** EchoSponge is comprised of donated human tissue that has been screened, recovered and serologically/microbiologically tested at CLIA certified labs in full adherence with FDA, States and AATB requirements. Frontline products are manufactured under strict controls and terminally sterilized with a validated sterilization process to ensure all products meet a SAL of  $10^{-6}$ . Frontline is FDA registered, AATB accredited and licensed by all applicable states. We maintain the highest standards to ensure all products are of the highest quality, safety and effectiveness.

## Product Offering

| Item Number      | Size       |
|------------------|------------|
| FL-ES-101010-DCB | 10x10x10mm |
| FL-ES-121212-DCB | 12x12x12mm |
| FL-ES-141414-DCB | 14x14x14mm |
| FL-ES-202020-DCB | 20x20x20mm |
| FL-ES-501007-DCB | 50x10x7mm  |
| FL-ES-201507-DCB | 20x15x7mm  |
| FL-ES-302005-DCB | 30x20x5mm  |
| FL-ES-401505-DCB | 40x15x5mm  |
| FL-ES-502005-DCB | 50x20x5mm  |
